RE: Supplemental Environmental Assessment
Valley County Wind Energy Project (VCWEP)

Dear Reader:

The Bureau of Land Management (BLM) and the Montana Department of Natural Resources and Conservation (DNRC) invite public comment on a revised proposal by Wind Hunter LLC to build the Valley County Wind Energy Project. The revised proposal has scaled back the size of the proposed wind energy farm from 500 MW to 170 MW and the related transmission line from a 230 kV to a 69 kV.

The attached supplemental Environmental Assessment (EA) and a Draft Finding of No Significant Impact (FONSI) which addresses the modified proposal are being provided for you to review. These documents are to provide the public with the current information regarding the construction and maintenance of a proposed 170 MW wind farm and the related 69 kV transmission line. The Supplemental EA describes agencies' objectives, the alternatives being considered, and briefly describes the environmental consequences.

These documents and the June 2006 EA may also be viewed at
http://www.dnrc.mt.gov/trust/wind/valley_county.asp.

If you would like your comments considered regarding the construction and maintenance of the proposed wind farm, please submit written comments to the BLM Field Station, PO Box 871, Glasgow, MT 59230 by May 4, 2007.

Sincerely,

John Fahlgren,
BLM, Glasgow Field Station Manager

Hoyt Richards
DNRC, Glasgow Unit Manager
